

Exponent Range

exp 17777 mean underflow
which means number is
to small for machine

underflow

20000 → 010 000 000 000 000
17777 → 001 111 111 111 111

↓ bit 2^{61}
↓ bit 2^{62}

if $2^{61} = 2^{62} = \emptyset$
underflow

exp 60000 means overflow
which means number to big
for machine

overflow

57777 → 101 111 111 111 111
60000 → 110 000 000 000 000

↓ bit 2^{61}
↓ bit 2^{62}

if $2^{61} = 2^{62} = 1$ says overflow

exponent ≥ 60000 results in floating point range error
exponent < 20000 treated as zero exponent (no error flagged)
