

Function Response (sheet 2 of 5)

Loaded into the foregrounds
channel data register

Subfunction	P-0		Description
	2 ¹⁵ --- 2 ⁰	2 ¹⁵ --- 2 ⁰	
210	0	0	Delayed response until CRC data is transferred to another node.
220	0	0	Immediate Response
230	0	0	Immediate Response
240	0	0	Immediate Response
250	0	0	Delayed response until the data is transferred to another node.
300	0	0	Immediate Response
310	0	0	Immediate Response
370	0	0	Immediate Response

C0001C0410

NOTE 1 - The disk controllers status register is loaded by subfunctions 060-064, 100 and 240. Following is a list of those subfunctions and the information that will be loaded into it. If the value loaded into the status register by the subfunction is read out by a subfunction 120g (Read Disk Controller Status) to the foreground, the status register will latch the internal disk controller status. Thus, a subsequent subfunction 120g will transfer the controller status to the foreground.
