If you come upon an artwork listing that is just a single alpha-numerical jumper location just check the drawing to make sure that it is on the drawing. No foil will need to be drawn from this hole, it is there only to connect to the board above or to the board below the one you are working on.

If you see artwork listings that have only lower case alpha-numerical listings you should find the one that is the jumper location and start your drawing of the listing from that point. After the jumper is located the other terms maybe located and connected in the shortest and most logical fashion possible.
